DESENVOLVIMENTO DE NOVOS PRODUTOS - INFORMAÇÕES PARA CLIENTES

1º. INÍCIO DO PROCESSO - Cliente faz o contato com o Setor de Vendas detalhando o produto que deseja e encaminha a solicitação com o desenho e/ ou amostras, *assim como informando detalhes sobre sua aplicação*, se vai ter contato com produtos químicos, derivados de petróleo, se vai ser fixado com cola ou parafusos, se vai resistir a altas temperaturas ou muito baixas e outros detalhes que facilitem a definição da borracha a ser utilizada. Também informa, se possível, a quantidade a ser comprada e eventual similaridade com outros produtos conhecidos.

2º. ANÁLISE DE VIABILIDADE E ORÇAMENTO INICIAL - O Setor de Vendas encaminha a Solicitação ao Setor de Desenvolvimento, com a documentação fornecida e a amostra (se houver) e aguarda o retorno. Ao receber os dados para produção, o Setor de Vendas elabora o orçamento e informa, por escrito, ao cliente.

3º. FORNECIMENTO DE AMOSTRA - Aprovado o orçamento, o cliente informa, por escrito, ao Setor de Vendas autorizando assim o Desenvolvimento do Produto com o fornecimento de amostras no prazo de 15 a 20 dias úteis. Produtos complexos ou que exijam o desenvolvimento de borracha que não é de linha podem exigir um prazo maior a ser negociado com o cliente.

4º. LOTE- PILOTO - Aprovada a amostra, com informações do Setor de Vendas, é negociado um primeiro lote de fornecimento para produção em linha.

5º. FIM DO PROCESSO - LIBERAÇÃO PARA PRODUÇÃO EM LINHA - Aprovado o lote- piloto, conforme necessidade do cliente, negocia com o Setor de Vendas a quantidade normal de consumo, com os prazos determinados, conforme carteira de pedidos da IBC.

6º. SOLICITAÇÕES ESPECIAIS FORA DO PROCESSO NORMAL - Qualquer exceção aos passos normais poderá ser negociada por Vendas junto ao Cliente, porém a responsabilidade sobre eventuais atrasos e/ ou prejuízos passará à responsabilidade exclusiva do Cliente, sendo que a IBC se exime de qualquer tipo de indenização e/ ou ressarcimento dos mesmos.

NOTA: Incluída cópia não- controlada com este mesmo conteúdo para folha do Catálogo. Distribuição para clientes em PDF.

SBR

- Borracha de Estireno Butadieno (SBR)
- É um copolímero de estireno e de butadieno

A Borracha de Estireno Butadieno é uma borracha com boa resistência à deformação (permanente à compressão). Possui ótima aderência a materiais rígidos.

Quando expostas às intempéries (agentes de clima e luz solar) deve ser usada com precaução devido a sua baixa resistência.

Seu uso não é recomendado quando em contato com altas temperaturas, óleos lubrificantes e fluidos a base de petróleo.

Geralmente utilizada para vedações onde o contato será apenas com pó e água.

Borracha de baixo custo para uso geral.

EPDM

- Borracha de Etileno Propileno Terpolímero (EPDM)
- É um terpolímero de etileno e propileno.

A Borracha de Etileno Propileno Terpolímero é uma borracha com ótima resistência às intempéries (agentes de clima e luz solar), e à deformação (permanente à compressão). Excelente resistência aos ácidos e álcalis, assim como soluções aquecidas de detergentes.

Apresentam também boa resistência a solventes oxigenados, fluidos hidráulicos e gordura animal.

É uma das borrachas mais consumidas no mundo, em mangueiras, vedações para uso externo, como esponjados para carrocerias e portas, gaxetas de autoclaves e lavadoras com vapor e água quente, com ou sem detergentes e clareadores.

Bastante usadas em frisos decorativos e de acabamento em móveis de uso externo e interno.

Seu uso não é recomendado para o contato com óleos lubrificantes e fluidos hidráulicos a base de petróleo.

Possui baixa resistência à chama, em condições normais.

Utilizada como guarnição de para brisas e janelas de ônibus, caminhões e veículos em geral.

NBR

- Borracha de Acrilonitrilo Butadieno ou Nitrílica (NBR)
- É um copolímero de acrilonitrilo e de butadieno.

A Borracha Nitrílica é uma borracha com boa resistência à óleos e combustíveis, boa resistência à abrasão, baixa permeabilidade à gases, média resistência ao calor, resistência à solventes e média resistência às chamas.

Alguns tipos (com PVC) tem excelente resistência às intempéries (ozônio).

Suas principais aplicações são em mangueiras para: solventes, óleos, graxas, combustíveis e gases, gaxetas e retentores.

Também são utilizadas para vedação de formas de concreto pré-moldado.

Largamente usada quando há contato constante com óleos, graxas, lubrificantes e combustíveis.
